AI PRODUCT DEVELOPMENT

Technology, research and product thinking

GRADES 9–10

Course Modules 01 – 08

Students explore key AI technologies and learn how research, data and digital tools support useful product ideas.

01 AI and Machine Learning
Learn how AI finds patterns and supports decisions.

02 Generative AI and Language Models
Explore text, image and idea generation.

03 Natural Language Processing
Understand how AI works with human language.

04 Computer Vision
Explore image recognition and visual classification.

05 Advanced Prompt Engineering
Use objectives, context, constraints and formats.

06 AI Research and Data Analysis
Compare sources and identify useful insights.

07 AI Productivity Tools
Support planning, communication and project work.

08 Automation Concepts
Connect tools and reduce repetitive digital tasks.

CORE CAPABILITIES

- AI foundations
- Research
- Data analysis
- Prompting
- Automation
- Responsible use

Explore applications Analyse data Select tools Build solutions

AI ENTREPRENEURSHIP

Product concept, prototype and startup pitch

GRADES 9–10

Course Modules 09–13

09 Problem Identification
Define a meaningful problem that needs a practical solution.

10 User and Market Research
Study target users, needs and existing alternatives.

11 Product and Solution Design
Define purpose, features, experience and use of AI.

12 Business Model and Branding
Explore value, customers, pricing and communication.

13 Prototype and Startup Pitch
Build a basic prototype and present the concept.

STARTUP DEVELOPMENT PROCESS

1 PROBLEM → 2 USERS → 3 SOLUTION → 4 PROTOTYPE → 5 TEST → 6 PITCH

FINAL PROJECT: BUILD AN AI STARTUP

Problem statement • Target users • Research findings • AI application • Product features

Prototype · Responsible AI · Business model · Brand identity · Startup pitch

Suggested themes: Education, healthcare awareness, environment, local business, accessibility and community services.

LEARNING OUTCOME

Entrepreneurial Thinking + AI Capability
